

SecurEasy™ 1.20 is now available

April 16th 2009 - The new and improved version of SecurEasy™ is now available. This release is the result of a development effort by the Orbium SecurEasy™ team to implement new functionalities and utilities which optimize the user experience.

SecurEasy™ is an application developed by Orbium that provides an intuitive visual interface that supports end-users to setup and maintain the Avaloq Security Engine.

SecurEasy™ 1.20 offers important improvements in usability but most importantly it provides several interface additions that make it the most complete release to date. Some SecurEasy™ 1.20 benefits are a better assignment of user roles and security levels, as well as improved user interface and an added feature to support Export Security and MESI (Multi Entity Single Instance)

As with previous SecurEasy™, the new release provides:

- A Multi-platform interface (Windows, Linux, UNIX, etc...)
- A Rapid navigation through the Avaloq Banking System security model
- A Centralized offline security backup.

Some of the highlights in the new release are:

- Incremental improvements and defect fixes
 - Resolved reported defects
 - Implemented 10+ feature requests
 - Improved MESI (Multi Entity Single Instance) system overview
 - Improved Report Engine
- Improved Usability
 - Improved menus and toolbars layout
 - Enhanced working area, dialogs and control panels for clarity and usability
 - Separation of functional and object security
 - Supports saving of preferences
- Enhanced appearance
 - Improved consistency of UI (User Interface) elements and the navigation within SecurEasy™
 - Other modifications to the default theme including new login and more!
